### Case Study – Security hardening of critical Defence asset

#### About Boosst EDS

Established in Melbourne in 2017, Boosst Electrical, Data and Security (Boosst EDS) has grown into a progressive and innovative company providing specialised Electrical, Data and Communications services throughout Australia.

Since establishment Boosst EDS has built an excellent reputation within Government, Commercial and leading industries as a reliable, accessible and dynamic entity able to provide innovative and high-quality solutions tailored to customer expectations.

Boosst EDS' vision is to be the leading provider of innovative and reliable security application solutions with Australia. Our commitment to sustainability, ethics, and continuous improvement drives us to create value for our customers and contribute to the growth and development of the communities we serve.

#### The Challenging Customer Requirement

Boosst EDS was integral to the deployment of a critical, cutting-edge perimeter detection system at a high profile Australian Defence Force facility. This role included the provision of civil, electrical, and fibre optic installation and commissioning.

This ambitious project was made feasible through a strategic collaboration with Brassets Group, a global Tier One leader renowned for security design and installation of critical and highly sensitivity sites such as nuclear power stations, military bases, infrastructure, and government assets.

#### The Boosst EDS Solution

The Boosst EDS solution was initiated through a strategic approach, involving the establishment of partnerships with reliable product suppliers capable of delivering cost-effective and readily available equipment. This strategy was devised to align with the detailed designs provided by Brassets Group and supports their desired outcomes.

Throughout the project, Boosst EDS maintained robust systems and procedures to achieve operational efficiencies in a complex and challenging project environment, whilst nurturing robust business relationships with project stakeholders. Substantial effort was also invested to uphold professional and technical standards across our entire workforce deployed in the field.

We deployed skilled personnel to design, meticulously plan, and deploy the latest technical methodologies to meet project delivery requirements and specific KPIs.

Our success has been significantly influenced by collaborations with diverse teams spanning various industry sectors. We have effectively executed projects within high-profile government security facilities, and our enduring partnership with Brassets Group continues to be a pivotal element in our accomplishments.

*"The project has successfully realised its intended objectives, and our team remains steadfast in its commitment to delivering the utmost excellence. At present, the project is nearing its finalisation phase, aligning with our dedication to achieving the highest standards of quality and success."* - Leigh Bradbury – Managing Director, Boosst EDS

*"Collaborating with the committed team at Boosst EDS on the Defence Perimeter Hardening Project has unequivocally demonstrated their commitment and relentless ambition to succeed with each project with a strong foundation based on compliance and accountability"* - Les Curlewis - Chief Operations Officer, Brassets Group – Technology
